

THE MOTORSPORT ACADEMY

Drive it. Train for it. Race for real.

The complete curriculum — every programme, every session, and the racing concepts behind them. From a first lap to a real seat.

WHAT THE ACADEMY IS

Not track time. *A pathway.*

Most places sell you hours on a machine. The Motorsport Academy is a structured programme — taught in real lessons, measured against real benchmarks, ending at a real motorsport seat. It is the only place in India where a beginner can start at a screen and finish in a race car.

3

tiers — Initiation, Advanced,
Sim + Reality

APEX

every session: Aim, Practice,
eXecute, eXamine

100%

telemetry-led — the data is the
teacher

1

real seat earned every year via
The Ladder

Parents say yes because it reads as institutional training. Sponsors back academies, not arcades. Champions become **Academy graduates** — a brandable outcome.

THE JOURNEY · ONE CUSTOMER, FIVE STEPS

From your first lap to *a real seat*.

Most stop at Open Sessions. Some progress. The few who reach the top earn the seat — one driver, every year, drives for real.

The *APEX* loop.

Named for the point every corner is built around. One concept per session: we **Aim** at it, **Practice** it in isolation, **eXecute** it on a full lap, then **eXamine** the data together. Run identically by every coach, at every centre.

Progression is **earned, never given** — every tier is gated by a benchmark time logged on the driver's VMS Driver Card. Attendance passes nothing.

HOW A DRIVER IS BUILT

The right order of *skills*.

The most common mistake is chasing lap time first. We teach the order that actually compounds — speed is the *output* of control and consistency, never the starting point.

THE FOUR SKILL LEVELS

Initiation delivers Level 1. Advanced delivers Levels 2–4. Each Level ends with a Challenge Gate you must clear to progress.

Every skill has a *drill*.

"Work on your braking" is a vibe. "Get gold on the Braking Box" is a task — a setup, a number, a target. The Academy is built from named, telemetry-scored drills, one per concept. The coached drills *are* the self-serve Practice Trainers, so homework and coaching speak the same language.

NAMED DRILLS — A SAMPLE

L1	The Braking Box	Stop in a shrinking box, zero lockups.
L1	The Metronome	5 laps inside a tight delta — spread, not pace.
L2	The Release Ramp	Trail-brake pressure bled smoothly to the apex.
L2	The Slip Window	% of the corner held at the grip limit.
L3	Rotation Point	Place the rotation, then power out.
RAL	The Flick	Pendulum the car to rotate on a loose surface.

EVERY DRILL IS A CARD

▶	Setup	The scenario — corner, rig, condition.
▶	Metric	The telemetry channel that scores it.
▶	Marks	Bronze / silver / gold — gold ≈ instructor pace.
▶	Coach cue	What to say · what to read in the trace.
▶	Common error	The mistake to catch first — the "BAD".

One vocabulary, four modes — a coached drill, a Challenge Gate, solo homework, or a workshop station — always the same named exercise.

THE PROGRAMMES AT A GLANCE

Three tiers. *One clear path.*

TIER 1 · ENTRY

Initiation

4 sessions x 1 hr

₹8,000

cohorts of 4–6

- › Learn properly, earn your Licence
- › Step 1 of The Ladder
- › Unlocks Championship + Advanced

TIER 2 · ADVANCED

Advanced

Circuit 8 · Rally 10 sessions

₹20–25K

circuit / rally

- › Racecraft, setup, tyre management
- › Or rally: pace notes, loose surface
- › Become championship-ready

TIER 3 · PINNACLE

Sim + Reality

4 prep + real-car day

₹1.75–2.25L

ARKA / Buzzing Hornet

- › Sim prep, then a real car, real venue
- › Telemetry: sim vs real
- › Also won as The Ladder prize

Track Day Programmes — ₹25K / ₹50K

SEPARATE · HNI SUPERCAR OWNERS · MMRT / BUDDH PREP

Tuner Lab — ₹28K / person

SEPARATE · CORPORATE · VEHICLE DYNAMICS & SETUP

Track Day and Tuner Lab sit outside the career path — premium products for distinct audiences, not steps on The Ladder.

The Racing Line

TAUGHT · INITIATION S2

The fastest way through a corner is rarely the shortest. Enter wide, clip the inside at the apex, run wide again on exit — straightening the corner to carry more speed.

✗ **BAD** Take the shortest path — hug the inside kerb the whole way through.

✓ **GOOD** **Out-in-out:** wide entry, clip the apex, run wide on exit — the straightest, fastest arc.

— Racing line --- Slow / geometric line

Braking — Points & Threshold

TAUGHT · INITIATION S3

Brake hard, brake late, brake at the same place every lap. Pick a fixed reference — a board, a kerb — and hit the pedal there. Then brake as hard as the tyres allow, just short of locking.

x BAD Brake early and gently, coasting in — and braking in a different place each lap.

✓ GOOD Brake **late and hard to the threshold** at a fixed marker — max grip, no lock-up, repeatable.

— Speed — Brake input

Trail Braking

TAUGHT · ADVANCED S1

Don't finish braking before you turn — overlap them. Keep bleeding off the brake as you add steering lock. The load stays on the front tyres, they keep biting, and the car rotates into the apex.

x BAD Finish all braking in a straight line, then turn — the car won't rotate and runs wide.

✓ GOOD **Bleed the brake as you add lock** — weight stays on the front tyres and the car rotates to the apex.

— Brake pressure — Steering angle

Throttle & Corner Exit

TAUGHT · ADVANCED S2

Slow in, fast out. Sacrifice a little entry speed for a later apex. It points the car straight earlier, so you can get on the throttle sooner — and that speed multiplies all the way down the next straight.

- x BAD** Apex early and floor it — the car runs wide on exit and you have to lift.
- ✓ GOOD** **Slow in, fast out:** a later apex straightens the exit, so you get on power early and carry speed down the straight.

— Fast out (late apex) --- Slow out (early apex)

Understeer vs Oversteer

TAUGHT · ADVANCED S4

Every car has a balance — and you can read it, then change it.
Understeer is the front giving up first; oversteer is the rear. Knowing which you have tells you how to drive it, and which setup knob to turn.

✗ **BAD** Fight every slide with more steering and hope it sticks.

✓ **GOOD** **Read which end let go** — front (understeer) or rear (oversteer) — then fix it with line, inputs, or setup.

Overtaking — The Switchback

TAUGHT · ADVANCED S5

The best pass often happens on the way out, not the way in.
Sacrifice the entry, let the defender take the normal line, then cut back underneath for a far better drive onto the next straight.

- x BAD** Send it down the inside and out-brake yourself — you both lose.
- ✓ GOOD** **Sacrifice the entry, cut back** behind them, and pass on the better exit onto the straight.

— Attacker — Defender

The Scandinavian Flick

GRAVEL · loose surface

TAUGHT · RALLY S2

On a loose surface, you steer with weight, not just the wheel. A quick flick away from the corner loads the outside tyres — then releasing it swings the car like a pendulum, rotating it into the turn before you've even reached it.

x BAD Just yank the wheel into the corner on gravel — the car pushes straight on.

✓ GOOD **Flick away first**, then back in — the weight transfer rotates the car into the corner for you.

Pace Notes

TAUGHT · RALLY S4-S5

A rally driver races a road they've never seen — read to them, in code, by a co-driver. Pace notes describe every corner before it arrives: how sharp, how far, what's hiding over the crest.

✗ BAD Drive only what you can see — always reacting late to the next corner.

✓ GOOD **Drive the note:** the co-driver calls the corner — severity, distance, hazards — before you see it.

Weight Transfer & The Contact Patch

TAUGHT · TUNER LAB + EVERYWHERE

Grip follows load. Brake, and weight pitches onto the front tyres — their contact patch grows and they grip harder, while the rears go light. Every input you make moves weight, and weight is grip. This is the idea behind *all* of car control.

✗ **BAD** Stab the brake or throttle mid-corner — the sudden load change unsettles the car.

✓ **GOOD** **Move weight smoothly** — load the tyre you need to grip: brake loads the front, throttle the rear, turning the outside.

Initiation

4 sessions × 1 hr · beginner → licence-ready · cohorts of 4–6

₹8,000
STEP 1 OF THE LADDER

S1	Cockpit & Car Control	It's not a video game. Seating, force-feedback wheel, load-cell brake. Smooth inputs and the basics of weight transfer. Drill: brake modulation + slalom.
S2	The Racing Line	Out-in-out, the apex, slow-in-fast-out. Corner types and how the apex moves. Drill: one corner repeated; apply over a full lap.
S3	Braking	Braking points & reference markers. Threshold braking — max deceleration without locking. Begin braking into the turn. Drill: the braking box.
S4	The Complete Lap + Assessment	Linking corners, rhythm, vision. Timed run against the Licence Lap benchmark, then a cohort race to finish.

ASSESSMENT & OUTCOME

Pass = beat the benchmark → **Initiation Licence** (lifetime) + certificate + VMS Driver Card. **Distinction** = beat Gold Standard. **Win** = top the cohort race (counts as Ladder Step 1).

Advanced — Circuit

8 sessions × 1 hr · Le Mans Ultimate + iRacing · requires Initiation Licence

₹20,000
→ CHAMPIONSHIP-READY

S1	Trail Braking	Overlap brake & steering to rotate the car. The biggest pace unlock.
S2	Throttle & Exit	Modulate to the traction limit; exit speed feeds the whole straight.
S3	Advanced Line	Compromise lines, double-apex, elevation & camber.
S4	Setup Basics	Read understeer/oversteer; make one change, feel it. Dial out a problem.

S5	Racecraft I	Starts, the run to T1, overtaking: late-brake, switchback, undercut.
S6	Racecraft II	Defensive line, side-by-side, wheel-to-wheel awareness.
S7	Tyre & Race Mgmt	Degradation, stint pacing, qualifying vs race pace.
S8	Race Sim + Assessment	Full weekend: qualifying + sprint + feature. Graded on pace, consistency, craft.

OUTCOME

Championship-ready certification — eligible to enter the Circuit Championship and target Quarterly Shootouts and the Grand Final.

Advanced — Rally

10 sessions × 1 hr · AC Rally + Richard Burns Rally · requires Initiation Licence

₹25,000

→ ARKA RALLY DRIVE PATH

S1	The Loose Surface	Grip on gravel, slip angle, commitment, looking far ahead.	S6	Surface Reading	Swept gravel, ruts, mud, tarmac transitions, rain & night.
S2	Scandinavian Flick	Pendulum weight transfer to rotate before the corner.	S7	Jumps & Crests	Attitude over jumps, blind crests, don't-cut hazards.
S3	Left-Foot Braking	Set attitude without lifting; keep the turbo spooled.	S8	Stage Craft	Pace without over-driving; recover from a moment; preserve the car.
S4	Pace Notes I	The numbering system, distances, links & modifiers.	S9	Tarmac Rally	More grip, tighter line, kerbs — the mindset shift.
S5	Pace Notes II + Co-Driver	Blind stage on a co-driver's calls — the real experience.	S10	Rally Sim + Assessment	Multi-stage mini-rally, combined time. Graded on pace + note execution.

OUTCOME

Rally Championship-ready — exceptional graduates flagged for the ARKA Rally Drive pathway via The Ladder.

Sim + Reality

4 sim-prep sessions + 1 real-car day · also won as The Ladder prize

₹1.75–2.25L
ARKA RALLY / BUZZING HORNET CIRCUIT

P1	The Real Car	What changes sim → real: g-forces, fear, fatigue, no reset. The specific car — specs, controls, quirks. The mindset shift.
P2	Learn the Venue Cold	The actual stage / circuit (e.g. MMRT) replicated in sim. Memorise every corner, marker and surface change before arriving.
P3	Technique Transfer	The techniques that matter most in this car on this venue — what translates 1:1, what feels different, the reference points that hold in reality.
P4	Safety & The Plan	HANS, harness, fire, marshals, flags, comms; rally co-driver protocol. The minute-by-minute plan for the day.

THE REAL-CAR DAY

Morning: sim warm-up on the venue + final brief & scrutineering. **Afternoon:** a real car on a real stage/circuit with the ARKA / Buzzing Hornet team and full safety crew. **Debrief:** sim trace vs real trace, side by side — plus an edited onboard video. The proof, delivered.

OUTSIDE THE ACADEMY PATH · CHENNAI-SPECIFIC

Track Day Programmes

For supercar owners preparing for real circuit days at MMRT / Buddh / Coimbatore. 90-minute sessions. 90%+ margin.

Track Day Prep

₹25,000 · 4 × 90min

S1	Why Sim Prep + MMRT	Learn the circuit cold, corner by corner, before you arrive.
S2	Braking & References	Threshold braking in a high-power car; fixed markers per corner.
S3	Line & Managing Power	Racing line at MMRT; controlling a powerful RWD exit.
S4	Recovery & Safety	Spin recovery, flags, etiquette, when to back off. Full lap.

Advanced Performance

₹50,000 · 6 × 90min

S1	Reading Your Data	Telemetry literacy — find your own time loss.
S2	Quali vs Race Pace	The one-lap max vs the sustainable, repeatable pace.
S3	Advanced Braking	Trail braking in the real-car context.
S4	Tyre & Consistency	Keep tyres alive over a 20-min session.
S5	Sector Optimisation	Data-led, sector by sector at MMRT.
S6	Mock Session + Plan	Full debrief + personal improvement plan.

OUTSIDE THE ACADEMY PATH · CORPORATE & ENGINEERING

Tuner Lab

8 sessions × 3 hrs · min 4 per cohort · vehicle dynamics as a teamwork metaphor

₹28,000
PER PERSON

S1	Vehicle Dynamics 101	Contact patch, friction circle, weight transfer — the mental model.	S5	Aero & Gearing	Downforce vs drag; ratios matched to the track.
S2	The Tyre	Grip, slip angle, temperature, pressure — the centre of every decision.	S6	Alignment	Camber, toe, caster — grip, wear and stability.
S3	Springs & Dampers	Mechanical grip and body control; how fast weight transfers.	S7	Data-Driven Setup	Diagnose from the trace. Hypothesis → one change → test.
S4	Anti-Roll Bars & Balance	Tune understeer/oversteer front-to-rear; feel it flip.	S8	Team Setup Challenge	Teams tune a car against the clock, then race off. Leadership metaphor in full.

THE HOOK

Every other corporate offsite is paintball. This one teaches your team how engineers actually solve problems — **data over opinion, disciplined iteration** — and ends in a race.

Beating the clock is *half of it.*

Car handling makes you fast alone. **Racecraft** is racing other people — and it's what actually wins Live Races and unlocks the real seat. Taught through Championship weekends and ARKA pro masterclasses.

01

Foundations

- › The rules of racing
- › Awareness & patience
- › Win the exit, not the ego

02

Battle Dynamics

- › Switchback & divebomb
- › The squeeze · multi-car
- › Drafting & dirty air

03

Strategies

- › Race starts & Turn 1
- › Tyre & fuel over a race
- › Quali vs race pace

04

Psychology

- › Commitment
- › Assertive, not aggressive
- › Composure · the long game

Most academies skip the mental game. We don't — the prepared, composed driver is the one who finishes.

BETWEEN THE COACHING

Something to *beat*, every visit.

Coaching is rare; practice is constant. Self-serve, auto-scored trainers and challenge gates keep drivers sharpening between sessions — and gate the climb up the Levels.

PRACTICE TRAINERS

▶	Brake Precision	Stop in a shrinking box without locking — accuracy + repeatability.
▶	Race Start	Reaction time + a clean run to Turn 1 vs AI.
▶	Consistency	Scored on lap-time spread, not outright pace.
▶	Limit Drill	Percentage of the lap held at optimal slip.

CHALLENGE GATES

L1	Licence Lap	Beat the benchmark → Initiation Licence.
L2	Consistency Gate	5 laps inside a tight delta window.
L3	Precision Gate	Hit apex + braking targets across a lap.
L4	Limit Gate	Beat the Gold Standard → Championship-ready.

Bronze / silver / gold standards · auto-scored by VMS · posted to the lounge leaderboard. Fail a gate, you repeat — that's what makes the certificate mean something.

The themed *workshop*.

The group format — for corporates, birthdays, and the monthly community night. One theme, four blocks, a live leaderboard. Everyone learns the same idea, drills it, then races it under pressure.

Themed editions — **Brake Later · Race Starts · Wet Weather · Qualifying Lap · Wheel-to-Wheel**. Run one a month and the room has a reason to return that isn't a private booking.

WHY IT'S A SYSTEM, NOT A STAR COACH

Consistent at *every centre.*

Two things make the Academy repeatable instead of dependent on one gifted instructor: a record that remembers every driver, and a playbook that makes any certified coach deliver the session a veteran would.

THE DRIVER RECORD

▶	Level & gate	Current Level + progress to the next gate.
▶	Drill PBs	Bronze / silver / gold on every trainer attempted.
▶	History	Full telemetry trace archive + session notes.
▶	Gate results	Passed / repeating — earned, never given.

Progress compounds across visits. Your record lives with us.

THE COACH PLAYBOOK

▶	Certified	Coaches signed off before they run paid sessions.
▶	Drill cues	Each card: what to say · what to read · the common error.
▶	Quality bar	Every session ends with a logged number; every driver leaves knowing their next gate.

A new coach runs the same session a veteran does. That's how it scales across the partner network.

THE ENGINE

A reason to come *back*.

Every part of the Academy points at the next visit. The loop that makes training *effective* is the same loop that makes it a *business* — a driver always has somewhere to go next.

A number that moved, a drill to practise, a gate to clear, a record that remembers, a championship to climb. **Each arrow is a reason to book again.**

THE PATHWAY, IN THREE WORDS

Drive it. Train for it. Race for real.

"The next great Indian driver will tell their story starting with three words: I started at RaceSims."

Initiation

₹8,000 · earn your licence
